

Engineering Apprentices required for established companies

City Training Services are recruiting Apprentices on behalf of some of the regions leading Engineering Companies; we have full-time permanent vacancies for;

Fabrication and Welding-Sheet Metal Work

Bending, cutting and joining metals is a specialist skill requiring concentration and precision, the role involves using MIG and TIG welding applications, CNC training and manual metal arc techniques. The Apprenticeship involves a blend of practical on-the-job experience and College tuition.

Mechanical / Electrical Engineering

Engineers are in great demand and we have roles for people who are looking for an excellent grounding in fitting, turning, milling, grinding and electrical work. The range of work is stimulating and includes the manufacture of tooling, CNC programming and setting, the installation and commissioning of plant, and machine maintenance. Day release to College for theoretical knowledge and on the job experience for a solid grounding in this skilled profession

Applicants should have, or be working towards GCSE grades A-D in Maths and English.

Apprentices will enjoy all the benefits of being employed from day 1 whilst working towards a Nationally recognised qualification at NVQ level 2 progressing to level 3 for suitable candidates, all of which can act as a springboard into career progression and promotion.
